Are you interested in any Landscape Architecture field? □
Would you like to extend your knowledge on that issue? □
Would you like to increase your capacities to develop and share your research activity? □
Have you ever thought of doing a doctoral dissertation or writing your Master Thesis? □

If your answer is YES for some of these questions, the course MAR-E1006 Landscape Architecture & Research offers you the possibility to start your research career in a practical way. You just need to choose the subject and develop during the course a Research Plan, just for the pleasure of researching or as a first step for your future Doctoral Dissertation or Master Thesis.

The course will be structured in three phases to cover different aspects related with the Research activity: (1) A COMMON RESEARCH LEXICON Defining together the main Research Concepts and Methodologies, (2) EXPLORING RESEARCH FIELDS on Landscape Architecture and choosing a topic for the Research Plan, and (3) WRITING a Research Plan (for your Doctoral Dissertation or Master Thesis)
